Security Management System (SMS) v6.1.0
Threat Protection System (TPS) v6.1.0

August 10, 2023

Trend Micro™ TippingPoint is pleased to announce the following software releases.

❖ **Security Management System (SMS) v6.1.0**

- SMS TOS v6.1.0 includes support for TPS TOS v6.1.0 appliances and backward compatibility for supported TPS TOS versions.
- Enhancements to Trend Vision One™ integration include the ability to:
    o Integrate your SMS with Network Intrusion Prevention without deploying a Service Gateway
    o Send URLs for Cloud Sandbox Analysis
- SMS TOS v6.1.0 upgrades are only supported from an SMS installed with SMS v5.4.1 or later. Attempts to upgrade from an older release will return an error. If you are upgrading from an earlier version, refer to the release notes of any interim releases for additional enhancements.
- If your SMS system operates in High Availability (HA) mode, you must break HA and upgrade each SMS independently before re-establishing your SMS HA cluster.

❖ **Threat Protection System (TPS) v6.1.0**

- TPS TOS v6.1.0 includes support for 1100TX, 5500TX, 8200TX, 8400TX, and 9200TXE TPS devices only.
- The 9200TXE device now supports TLS inspection in a stacked configuration.
- TPS TX series devices running TOS v5.5.4 or earlier must migrate to v5.5.5 before upgrading to v6.1.0.
- All TPS devices running TOS v6.1.0 or later use DV v4.0.
- Using the Local Security Manager (LSM) interface is no longer supported. Users can continue to use the Command Line Interface (CLI) interface to manage their devices.
- FIPS mode is not supported. If you upgrade from TOS v5.5.5 with FIPS mode enabled, the upgrade to v6.1.0 will succeed, but the device will incorrectly report that it is still in FIPS mode.

Refer to the product Release Notes for a complete list of enhancements and changes.
