

TippingPoint Product Announcement

Threat Protection System (TPS) v6.1.0

August 16, 2023

Trend Micro™ TippingPoint is pleased to announce the following software releases.

Threat Protection System (TPS) v6.1.0

- TPS TOS v6.1.0 build 12541 includes support for 1100TX, 5500TX, 8200TX, 8400TX, and 9200 TXE TPS devices only.
- TPS TX series devices running TOS v5.5.4 or earlier must migrate to v5.5.5 before upgrading to v6.1.0.
- All TPS devices running TOS v6.1.0 or later use DV v4.0.
- Using the Local Security Manager (LSM) interface is no longer supported. Users can continue to use the Command Line Interface (CLI) interface to manage their devices.
- FIPS mode is not supported. If you upgrade from TOS v5.5.5 with FIPS mode enabled, the upgrade to v6.1.0 will succeed, but the device will incorrectly report that it is still in FIPS mode.

Recommended action: We strongly recommend upgrading the Security Management System (SMS) Certificate Key to a 2K key to avoid future compatibility issues
