

TippingPoint Software Release Announcement

Trend Micro™ TippingPoint has released Patch 2 for SMS v5.3.0; this is a maintenance release that addresses the following issues:

- Profile distribution fails in complex virtual segment deployments
- SMS diagnostic log files become increasingly large as more are generated
- Syslog outputs reporting old events and missing key ArcSight CEF fields
- Syslog performance optimizations related to event output delays
- RADIUS authentication fails on service restart
- SMS becomes unresponsive during boot in large deployments
- WHOIS lookups not returning results correctly in SMS

Important Notes:

- All SMS v5.3.0 customers are encouraged to install this patch at the earliest opportunity.
- Patch installation should take approximately 15 minutes.
- The SMS Server will automatically reboot after patch installation. You will then be prompted to update the SMS client.

For a complete list of enhancements and changes, refer to the product [Release Notes](#).
