

To: Trend Micro™ TippingPoint Customers

Subject: Software Release Announcement

Trend Micro™ TippingPoint has released Security Management System (SMS) v5.4.1 and Threat Protection System (TPS) v5.4.1; this is a maintenance release that addresses the following issues:

- SMB flow issue related to Trust actions on the 8x00TX platforms
- TLS Inspection connections persisting when the connection becomes idle/inactive or were closed incorrectly by up/downstream devices
- Additional diagnostic commands added for TLS Inspection related items
- Profile distribution errors when using TLS Inspection on TPS 2200T platforms
- Default CA package errors causing distribution errors for TLS Inspection profiles
- Various UI event and log data display errors

Important Notes:

- If you are upgrading from an earlier, nonsequential TOS, refer to the release notes of any interim releases for additional enhancements.
- Before you upgrade your device to the latest TOS, maximize the space on your device by removing outdated TOS versions and packet traces that are no longer required. This ensures a successful upgrade and allows for a TOS rollback, if necessary. You can remove previous TOS versions using the SMS, the LSM, or the CLI.
- All SMS devices must be running a minimum of v5.3.0 before installing this version.
- All TPS devices must be running a minimum of v5.4.0 before installing this version.
- Use SMS v5.4.1 and later to manage a TPS device with this release.
- SMS v5.4.1 and TPS v5.4.1 will be released into manufacturing after 90 days and will include new devices and any RMA replacements

For a complete list of enhancements and changes, refer to the product [Release Notes](#).

For questions or technical assistance, on any Trend Micro TippingPoint product, contact the Trend Micro TippingPoint Technical Assistance Center (TAC).
