Subject: Software Release Announcement

Trend Micro™ TippingPoint has released Threat Protection System (TPS) v5.2.3; this is a maintenance release that addresses the following issues:

- SMB flow issue related to Trust actions on the 8x00TX platforms
- Mishandling of malformed tunneled HTTP responses

Important Notes:

- If you are upgrading from an earlier, nonsequential TOS, refer to the release notes of any interim releases for additional enhancements.
- Before you upgrade your device to the latest TOS, maximize the space on your device by removing outdated TOS versions and packet traces that are no longer required. This ensures a successful upgrade and allows for a TOS rollback, if necessary. You can remove previous TOS versions using the SMS, the LSM, or the CLI.
- All TPS devices must be running a minimum of v5.2.0 before installing this version.
- Use SMS v5.2.0 and later to manage a TPS device with this release.

For a complete list of enhancements and changes, refer to the product [Release Notes](#).
